controls, and relatively high damage potential with the addition of the Spirit combo.

ADVERTISEMENT

Having moderately high attack power combined with mobility means having some drawbacks, however. Since its departure from the Great Sword family, the Long Sword has no ability to guard against attacks by any means, aside from

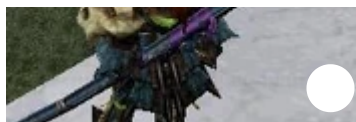

the standard dodge rolls. Thus, the hunter must be aggressive enough to know when and where to attack, while being cautious enough to know when to cease attacks and dodge. The Long Sword has a short delay after most attacks, but balances this with a back-hop/wide swing attack (known officially as the "Fade Slash") which can be performed after any attack, allowing fluidity. The hunter must take some risks, in order to fill up their

Long Swords are very versatile weapons. Their handling is quite different from the Great Sword's, even though they come from the same branch. Hunters will find that one can often upgrade a Great Sword into a Longsword, but almost never vice-versa.

- Long Swords are very fast compared to Great Swords and can land hits much faster.
- Attacks can be chained together very easily. For example, triangle, triangle, circle, triangle is loop-able and helps fill the spirit bar very quickly.
- Long Swords have 2 main branches, Bone and Iron Katana. As per usual, the bone path favors elements and status effects while the Iron path favors raw damage and sharpness, though both have multiple

between will bounce normally. The extra reduction to sharpness from bouncing will still apply.

The Spirit Gauge is located beneath the Weapon Sharpness icon.

When filled, the Spirit Gauge will flash red and white, and the border will glow white.

- Once the Spirit Gauge starts decreasing, it will take approximately 35 seconds before completely emptying itself.
- Each Spirit attack will slightly deplete the Spirit Gauge but deal extra damage. In addition, Spirit Attacks have auto-ESP and do not bounce, regardless of weapon sharpness and hit location. Please note that **ONLY** Spirit Attacks gain ESP.
- Pressing triangle or circle after the first and second attacks of Spirit Combo will perform an additional, unboosted attack without interrupting the Spirit Combo.

ADVERTISEMENT

- Spirit Combo's attacks automatically have ESP - in other words, they never bounce.

## Limitations

- KO is impossible without additional tools.
- Requires deft precision with certain monsters where only certain areas are vulnerable, eg the Kirin's horn, a very small target, is its main weak spot.
- Although their unsheathed movement speed is faster than a GS, a Long Sword is still slower than a Sword and Shield, Light Bowgun or Dual Swords, all of which boast the highest mobility. Or even a Hunting Horn that has the buff for increased movement speed.

with red giving the most benefit. When a charge runs out, it will revert to the regular level, and the damage boost will be lost. Landing more Roundslashes with a certain charge will increase it to the next level, and landing one with a red meter will simply refresh the charge.

- The Fade Slash is able to hop to either side, not just backwards. Holding the control stick to the left or the right (with the Classic Controller) or tilting the remote on its side (Wiimote and Nunchuck) when performing a Fade Slash will move the hunter in that direction. The fade slash can only jump left or right if performed as part of a combo.

## Changes in MH3Prd

- It should be first noted that the changes to the Long Sword do carry over to Monster Hunter Tri-Ultimate, and also carries over to Monster Hunter 4.
- Spirit Blade attacks now consume spirit regardless of whether or not

[SIGN IN](#)[CREATE A FREE ACCOUNT](#)[Home](#)[Explore](#)[Saved](#)[Progress](#)[History](#)[Utilities](#)

ADVERTISEMENT

- Due to the changes made, the Long Sword has a more consistent damage than it did in Tri. Not only is it more consistent, but for skilled players, it's relatively easy to stay at a yellow or red charge for an entire hunt, after achieving it of course.

## Additions in MH4U

- In MH4U it's possible to do a spirit attack when fade slashing, so fade slash then spirit attack.
- The spirit gauge was changed so that, when a charge of any level elapsed, the long sword would again revert to its normal, colorless damage.

## Changes in MHG

- The spirit gauge was changed so that, when a yellow or red charge elapses, it only drops down to the previous level instead of losing all damage increases.

Piercing effect. Executing the move cost portion of the spirit gauge and a successful hit will reduce the spirit bar by 1 level.

- Foresight Slash will have players enter a brief stance before launching a horizontal slash. The move gives a window of invulnerability during the stance. This move can be executed without Spirit Gauge cost, doing so however, removes the invulnerability effects. This attack can be chained into the later half of Spirit Combo and consequently, the Spirit Roundslash.

## Iceborne

- As with all weapons, Iceborne allows Long Sword users to utilize the Slinger and Clutch Claw tool with weapon drawn. Players can now fire Slinger ammo in the middle of Spirit Combo.
- Players can now enter the Special Sheathe stance which works as a unique mechanic (Spirit button + Evade button). Entering the stance will have the hunter sheathe their blade into the scabbard held in their left hand. The stance will expire if maintained too long.
