PROFESSIONAL SUMMARY

Computer Science graduate from SIT, with hands-on experience building software across web, mobile, and desktop, from a C++ desktop tool with a full Figma export pipeline to QA work across web and mobile products during an 11-month placement at Trinax. Comfortable moving between software engineering and QA, with a solid grounding in OOP, machine learning, and cloud tools like AWS.

EDUCATION

Singapore Institute of Technology, Singapore August 2022 - Conferred May 2026
Bachelor of Science (Honours) in Computer Science with Interactive Media and Game Development

- Relevant Coursework: High-level Programming, Software Engineering Projects, Data Structures, Operating Systems, Machine Learning, Mobile and Cloud Computing.

DigiPen Institute of Technology, United States of America May 2024 - August 2024
SIT Exchange Programme

- Relevant Coursework: Psychology, Artificial Intelligence for Games, Level Design.

Nanyang Polytechnic, Singapore April 2017 - April 2020
Diploma in Infocomm & Security

- Specialization in Systems & Network Security.

TECHNICAL SKILLS

Programming Languages: C++, C#, Python, Kotlin, JavaScript, Node.js, HTML5.

Frameworks and Technologies: OpenGL (Dear ImGui), REST APIs, Svelte, Unity, MySQL.

Machine Learning and AI: Machine Learning (Supervised Learning), Artificial Intelligence for Games, Model Evaluation, Data Analysis.

Cloud and Infrastructure: AWS S3, RESTful Service Development.

Tools: Git, Figma, Mantis Bug Tracker, Axure, Tableau.

WORK EXPERIENCE

Trinax May 2025 – April 2026
Project Executive Intern & QA Tester

- Coordinated cross-functional teams across software, QA, operations, and creative for exhibitions, kiosks, and vending machine activations, supporting project delivery from development to deployment.
- Liaised with clients and internal teams on projects including URA Dream Lab, National Museum of Singapore, Singapore Customs, and GovTech Singapore, managing updates, expectations, and deliverables.
- Conducted functional, regression, and UAT testing for web, mobile, e-learning, and interactive builds, including DBS Tech Risk, SANA E-Escape Room, the NTU Health Education App, and GovTech installations.
- Logged and verified bugs in Mantis, validated content and user flows, and supported release readiness alongside developers.
- Applied tools and workflows including Unity, Figma, Svelte, Node.js, and Arduino-based systems in support of interactive digital product development and testing.

Fujitsu March 2019 - May 2019
Onsite Engineer

- Provided on-site IT support to 15–30 end users daily, resolving hardware and software issues to maintain uninterrupted workflows.
- Supported deployment and testing of new IT equipment, facilitating staff onboarding and integration into existing systems.

PROJECTS

MirrorCanvas - Figma-to-Prototype Tool May 2025 - April 2026

- Built a C++ REST pipeline to extract Figma design trees, resolve raster assets, and download images in parallel across a multi-threaded worker pool via AWS S3.
- Developed a native C++ desktop viewer using Dear ImGui and OpenGL with GPU texture caching, node inspection, wireframe mode, and live file-watch auto-refresh.
- Implemented a frame validation engine that reconciles design node IDs against generated Svelte routes, flagging missing nodes, stale files, and absent assets in the canvas.
- Built an editor with drag, resize, copy/paste, and undo/redo features, saving navigation definitions to JSON for the downstream code generation pipeline.
- Created a present mode prototype player with full screen frame navigation and browser-style history, allowing designers to validate application flows without the need for deployment.

Mobile Chat Application

January 2025 - May 2025

- Developed an Android messaging application using Kotlin and Jetpack Compose.
- Implemented local data persistence using Room Database and dependency injection using Hilt.
- Built responsive chat interfaces with real-time message updates and user interaction handling.
- Designed reusable UI components and navigation flows to improve maintainability and user experience.

Website Development and Data Management

May 2019 - August 2019

- Developed an EMR website displaying patient data, including vital signs, pain assessments, and oxygen levels, with real-time updates.
- Developed a secure login system for patients, doctors, and nurses, enabling role-based access.
- Optimized documentation and data management for seamless input, retrieval, and visual display, improving usability for medical staff.
- Collaborated closely with medical staff to gather feedback, employing guidance and insight to incorporate user-driven improvements into the website's design and functionality.

LEADERSHIP AND ACTIVITIES

Gamer's Guild

October 2022 – Present

Member & Team Leader

- Actively participated and led teams in team-building events and competitive student competitions, contributing to collaborative and strategic skills.
